

FROMMELT[®] ELIMINATOR[™] - GapMaster[™] II Soft-Sided Shelter

Pivoting canopy header protects unit from damage if trailer comes in off center or higher than expected.

Slim profile 6" wide side frames allow unit to fit in narrowest door centerline situations.

Durable foam frame design can take impacts from off-center trailers without damage. No need for expensive steel bumpers.

HMWPE-wrapped side frames give unit stability, yet can be fully compressed and return immediately to original shape and position.

Detachable side curtains are easily removed to allow increased air flow on the dock in warm weather, or can be quickly replaced if needed.

Rite-Hite[®] sectional doors include both traditional and fully impactable designs to fit your application requirements.

Self supporting fabric canopy header creates effective upper shelter without need to rest on side frames, preventing damage to side frames over time.

Available Firefighter[™] heat dissipating protection in head curtain can prevent burning from hot trailer marker lights.

Integral rain gutter diverts water off sides of shelter.

C-4 style head curtain rests with pressure on top of trailer, creating full height clearance inside trailer.

Durable GapMaster hook grasps firmly around edge of open trailer door to create an effective seal of hinge gap.

Flexible fiberglass stays hold curtain tight against trailer sides. Endcaps on stays prevent fabric wear-through.

Exclusive collapsible draft pad design resists damage from trailers and provides effective seal between trailer bed and shelter side curtains.

Rite-Hite[®] Safe-T-Lip[®] dock levelers and Dok-Lok[®] vehicle restraints lead the industry in preventing dock accidents.

Get full access, impactability and the ability to seal trailer hinge-gaps with slim profile ELIMINATOR-GapMaster II dock shelters

ELIMINATOR-GapMaster II shelters combine the complete closure of a dock seal and the full access of a dock shelter. Rugged GapMaster hooks grasp and effectively seal swing-out trailer door hinge gaps to provide a seal without restricting access to the trailer opening. Plus, impactable foam side frames are built to withstand hits from off-center trailers, eliminating the need for expensive repair costs associated with traditional rigid frame shelters.

And now, Frommelt ELIMINATOR-GapMaster II shelters, with advanced slim-profile side frame design, can accommodate wider trailers and fit narrower dock spaces, delivering greater flexibility and value than ever before.

RITE-HITE[®]

FROMMELT® ELIMINATOR™ - GapMaster™ II Soft-Sided Shelter

Ultimate Sealing Efficiency

Ordinary shelters can't seal the hinge-gap created by swing-out trailer doors. With exclusive, tight-sealing GapMaster hooks, however, ELIMINATOR-GapMaster II shelters can save up to \$500 per year per dock position in energy costs and help protect people and products from the elements. An optional sealing package is available for refrigerated trailer doors as well.

Ultimate Impactability

Frommelt's exclusive HMWPE-wrapped (high molecular weight polyethylene) foam-core side frames can compress fully to the wall, yet return to their original shape and position, time after time.

Ultimate Flexibility

With 6" wide, slim-profile side frames, ELIMINATOR-GapMaster II shelters can be positioned in the narrowest of dock spaces, and accommodate the widest trailers. There's often no need to reposition lights, signs or electrical conduit.

Easily removable side curtains

Velcro-attached side curtains can be removed to increase air flow into the dock area, for repair or replacement if worn or damaged, or to adjust the sealing effectiveness if width of common trailer traffic changes.

Enjoy your investment for years to come.

Only Frommelt ELIMINATOR-GapMaster II soft-sided shelters deliver all these exclusive benefits and come backed by a standard 36-month, money-back customer satisfaction guarantee when ordered with premium Frommelt fabrics.

See your Rite-Hite Representative today for more information on the ELIMINATOR-GAPMASTER II shelter, and sister products, the ELIMINATOR™ II soft-sided shelter, and the soft-sided COMBOSHELTER™ II, designed to meet the unique challenges of docks that receive both liftgate and standard trailers.
